Dear Members,

ULTRAVIOLET DISINFECTION EQUIPMENT, SPARES AND SERVICE

UV-Guard Australia Pty Ltd, a Clean TeQ subsidiary (www.cleanteq.com), has now been operating in the UV industry in Australia for 2 years, and now in New Zealand.

We have major contracts with municipal operators for servicing channel and closed reactor UV units supplied by other UV manufacturers such as Wedeco and Trojan. We also supply spare UV lamps and ballasts for the Orica (UVTA) teflon systems.

Ross Dive and Graeme Hesse, two of the Directors, have been closely involved in the Australian UV industry for almost 25 years as company owners, and as employees for Wedeco in Australia, where Ross was the MD. UV Guard was founded in 2008, and was wholly purchased in 2009 by CleanTeQ Holdings, a publicly listed company in Victoria, and since then UV-Guard has become a major force in the supply of spares and service and new installations. We can offer Australian made automatically wiped closed UV reactors for use around the STP for wash down water (refer latest installation at Berridale, NSW), and we are agents for Newland Entech Co Ltd who manufacture larger closed reactors and channel UV systems. (refer pictures).

Our Service Manager is John Muscat, who many of you will know from his days at Wedeco, installing UV systems and at times assisting you with service work. Other employees at UV-Guard have worked in the UV industry for some years as well.

The UV lamps we supply as replacements for the Wedeco systems are made by Aquafides in Germany. This company was established by a former CEO of Wedeco Germany, and the lamp manufacturing is managed by the former MD of lamp manufacturing for Wedeco, Norbert Bodenhausen. Many innovations have gone into his new and advanced manufacturing facility where lamps are manufactured with some key improvements and advantages. We have been supplying these lamps to customers here for over 18 months, and are offering quality service, technical support and pricing that many customers have not seen for some time.

Aquafides Lamp manufacturing facility at Mülheim, Germany.

Trojan lamps are made by a manufacturer in the USA who has had many years experience in the manufacture of such lamps, and we have some very satisfied customers here who have been using them for over 12 months.

We welcome the opportunity to quote for new systems, for servicing and supporting existing ones, and for the opportunity to supply spare parts. Any products and warranties are backed by our parent company, Clean TeQ, who some of you will know from odour control packages they have supplied.

Yours sincerely,

Ross Dive
Managing Director
