

## **Plant Operations Manager - Wastewater Treatment- Melbourne, Australia**

UGL Infrastructure delivers service solutions from project scoping and design through to construction, implementation, maintenance and operations to municipal and industrial clients in the water sector.

The role of Plant Operations Manager based out of our Clayton office is responsible for the safe, efficient and economical operation and maintenance of the Maffra Waste Water Treatment Plant. We foresee with time that this role will also take on other operating plants.

You will be accountable for providing direction and support for all the activities across the wastewater treatment plant. This involved planning, managing and controlling all operational and maintenance activities to ensure timely completion and compliance with the customer and legislative requirements, whilst maximizing efficiency and profitability. This diverse role requires a variety of technical competencies relating to operating and maintenance activities focusing on systems and equipment, prevention of unsafe or incorrect work practices and importantly the overall delivery to meet the client's needs.

To be successful:

- Significant experience in the operation and maintenance of potable water and/or wastewater treatment plants or other industrial plants
- Knowledge of waste water treatment plant processes and equipment and waste water quality testing requirements
- Knowledge of OH&S legislation, Environmental legislation, Regulations and Australian Standards as they apply to the construction/maintenance industry and plant operations
- Previous project management experience with sound budgetary, cash flow and financial reporting skills
- Ability to provide leadership to staff
- Formal Engineering / Science qualifications
- Formal qualifications in Waste Water Treatment desirable

UGL Infrastructure presents a genuine career path to high performers seeking to develop their career within a growing organisation.
